R.A.C.E Veneer Measuring Main Screen

The Ultimate Veneer Measuring Solution

The R.A.C.E. Veneer MPA system has been designed to track and record every movement of veneer from grading through to measuring to despatch.

Complimentary Software

The Veneer MPA system works with the RACE Veneer Grading system All veneer is recorded at the grading point, then measured using either existing measuring equipment of RACE measuring equipment. Veneer is allocated to orders or crates based on species, grade, customer and length specifications set up by staff.

Accurate with Every Read

A barcode is applied to each product to ensure traceability and accurate yield and production reporting. All data recorded can be ported into any database or back office system.

Open System Design

We can configure our software to work with your existing onsite systems, increasing the ease of integration and reducing installation costs.

We want to work with you!

R.A.C.E. software has been designed with customisation in mind. With almost 20 years experience in industrial workplaces, we understand that different companies have different requirements for their software, which is why we encourage them to actively work with us so R.A.C.E. can provide the most suitable and effective software solution.

Features:

- Accurate measurements from measuring hardware
- Product allocation based on user specifications
- Detailed info on all veneer production and available crates
- Real-time data available to back office systems
- Self diagnosing and monitoring utilities
- Advanced order allocation process and logic
- Design to run on RACE Industrial Touch Screens
